

# The Pain of Working with Legacy, and Strategies to Make It Easier

Opinionated views based on 20+ years in industry

Catherine Quinn 2023

“A legacy system is **outdated** computing software and/or hardware that is **still in use**. The system still meets the needs it was originally designed for, but doesn’t allow for growth. What a legacy system does now for the company is **all it will ever do.**”

How  
organisations are  
dealing with  
legacy today isn't  
working

Respect for the  
Application

Right Mindset

Sense of Ownership

Team Structure

# How organisations are dealing with legacy today isn't working

## Respect for the application

Undervalued

Reduced to a joke

Not given the same care and respect of go forward systems

Patching and clean up avoided

## Right mindset of individuals

Throw out good practices

Considered a detractor from career goals

# How organisations are dealing with legacy today isn't working

## Ownership

People actively avoid working on it

Over index “tick and flick” processes

## Team Structures

Allow for individuals to be single points of dependency

Two classes of citizens - Vanguard vs Old Guard

Optimises for those who already have knowledge and are uncomfortable learning new ways

The legacy world can also be used a place to cut your teeth and earn your stripes

What  
organisations are  
left with

Lack of knowledge

Additional time in  
incidents

A fragile system

Wasted time

This results in

Volatile and unpredictable  
behaviour

Additional unplanned  
work

Unpatched system /  
security risk

Vicious cycle

# We're thinking about legacy wrong

“A legacy system is **outdated computing software** and/or hardware that is still in use. The system still meets the needs it was originally designed for, but doesn't allow for growth”

“Legacies sometimes arise from extraordinary actions that can change the course of history as well as expectations for what is possible”

- Miller et al., 2009; Wittenberg, 2013; Wohl, 2019

# Heritage Listed Systems

“A Heritage listing provides formal recognition that a place or object has **historical significance** for the community and should be **protected under law**”

---

“It’s a building of great **historical** or artistic **value** that has **official protection** to prevent it from being changed or destroyed”

---

“The Heritage Act requires you to maintain your State significant heritage property so that it does not fall into disrepair and its conservation is not threatened”

## How to apply Heritage Listed thinking

### Team Structures

Create a culture where the team is overly protective

Establish and agree on ownership and domain boundaries

Separate the layers for team boundaries and ownership

Use a third party vendor - BE CAREFUL

### Ownership

Set clear ownership boundaries

Define the level of service you want to provide

## How to apply Heritage Listed thinking

### Respect for the Application

Get to know baselines

Apply good, modern practices

Dedicate time

### Right mindset of individuals

Always hire for mindset especially for senior roles where they already have the technical chops

Caretaking Heritage Listed applications can be very interesting

What  
organisations are  
left with

Stronger Engineering  
Teams

A system to last the  
duration

Best chance at hitting  
transformation targets

A Legacy to be proud of

# Applying these strategies

# Questions
